A research assistant that reads company documents

Build a RAG system that answers questions about a company from its SEC filings and earnings calls, with the source for every answer, and plug it into the FTMO research agent.

WHY

FTMO already knows prices and backtests. It does not yet know what companies say: guidance, risks, quarterly results. Her RAG adds that.

6	5	3	1
weeks	pilot stocks	document types	demo every week

Pilot stocks: **MU · SNDK · TSLA · GS · MSFT**

Documents: 10-K / 10-Q filings · earnings-call transcripts · earnings releases (8-K)

WHAT SHE WILL BUILD

1 Collect

Download filings (SEC EDGAR) and earnings calls (FMP)

2 Index & search

Split by section, embed, search by stock and quarter

3 Answer with sources

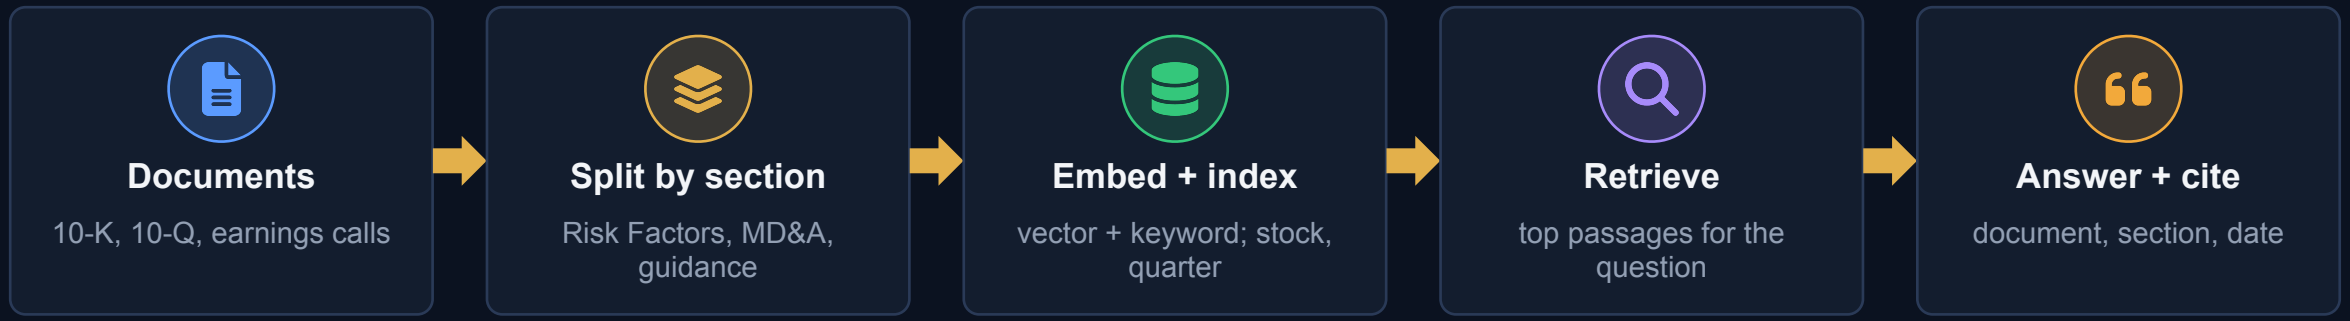

Grounded answers; every line cites document and section

4 Plug into FTMO

A research tool for the agent + a section on the dashboard

Same RAG skills, financial documents

EXAMPLE QUESTIONS SHE WILL MAKE IT ANSWER

“What revenue did Micron guide for next quarter?”

Finds the guidance line in the earnings call; cites call and date

“Which new risks did Tesla add to its latest 10-K?”

Compares Risk Factors with last year's filing

“Did Microsoft deliver what it promised last quarter?”

Pairs guidance with reported results: said vs actual

“Summarise Goldman's latest quarter in 5 bullets.”

Short brief; every bullet links to its source

Golden rule: every number is checked against FMP's financial statements, and if the documents don't say it, the answer is "not found", never a guess.

Six weeks, one working piece every week

Week	Learn	Build	Deliverable (Friday)
1	How 10-K, 10-Q, 8-K and earnings calls are structured; SEC EDGAR and FMP	Downloader for the 5 stocks; clean text with stock, form, quarter, section	Document store (~10 documents per stock) + a one-page data note
2	Splitting long filings by section; keyword + vector search; filters	Index and search(stock, question, quarter)	Search API + a 50-question test set with correct answers
3	Grounded answers, citations, saying "not found"	Q&A with sources; numbers checked against FMP	Q&A demo + accuracy report on the 50 questions
4	Earnings guidance; said vs actual	Pull guidance from calls → match next quarter's results → Beat / Hit / Miss	Promises table for the 5 stocks + a management-credibility score
5	Writing useful research summaries	One-page company brief: business, latest quarter, guidance, risks, what changed	5 briefs, every line cited, reviewed by the team
6	How the FTMO research agent and dashboard work	Read-only research tool + dashboard section + tests	Merged code + team demo

4 · RESULTS SHE MUST SHOW

Clear targets, checked every Friday

WEEKLY RHYTHM

Monday

Agree the week's goal and deliverable

Every day

Short written update: done, next, blocked

Friday

Demo + one-page note: what works, what doesn't, numbers

SKILLS SHE GAINS

- Reading 10-Ks, 10-Qs and earnings calls
- Evaluating a RAG system with a real test set
- Writing tested, production code in our repo

PROPOSED QUALITY TARGETS

Search	Right passage in the top 5 for ≥ 80% of test questions	from week 2
Answers	≥ 90% carry a correct citation	from week 3
Numbers	Zero made-up numbers: all checked against FMP	always
Said vs actual	Hand-check of one stock agrees with the tool	week 4
Briefs	A reviewer can verify any line from its source in under 5 minutes	week 5

Her RAG gives the FTMO agent company knowledge

SOURCES

SEC EDGAR
10-K, 10-Q, 8-K (free)

FMP connector
earnings-call transcripts, financial statements

Chandna's RAG

Company knowledge
index · retrieve · cite

Management lens (quality engine)

Fills the empty 15% lens: said vs actual → Quality × Edge dashboard

New research tool for the AI agent

Agent checks guidance and risks before proposing strategies; cites them in reports

Stock brief on the dashboard

Click a stock → cited brief next to its quality score and backtest verdict

Same safety rules as the agent: read-only · sources on every answer · numbers checked against FMP · no buy/sell advice · no broker access
